Performance

These encapsulate your web app's current performance and opportunities to improve it.

Metrics

These metrics encapsulate your web app's performance across a number of dimensions.

- ▼ First meaningful paint 11,640 ms
First meaningful paint measures when the primary content of a page is visible. [Learn more](#).

- ▼ First Interactive (beta) 15,130 ms
First Interactive marks the time at which the page is minimally interactive. [Learn more](#).

- ▼ Consistently Interactive (beta) 21,450 ms
Consistently Interactive marks the time at which the page is fully interactive. [Learn more](#).

- ▼ Perceptual Speed Index: 8,131 29
Speed Index shows how quickly the contents of a page are visibly populated. [Learn more](#).

- ▼ Estimated Input Latency: 33 ms 100
The score above is an estimate of how long your app takes to respond to user input, in milliseconds. There is a 90% probability that a user encounters this amount of latency, or less. 10% of the time a user can expect additional latency. If your latency is higher than 50 ms, users may perceive your app as laggy. [Learn more](#).

Opportunities

These are opportunities to speed up your application by optimizing the following resources.

- ▼ Offscreen images 8,260 ms
1,390 KB

Consider lazy-loading offscreen images to improve page load speed and time to interactive. [Learn more.](#)

▼ Uses an excessive DOM size: 2,894 nodes

58

Browser engineers recommend pages contain fewer than ~1,500 DOM nodes. The sweet spot is a tree depth < 32 elements and fewer than 60 children/parent element. A large DOM can increase memory usage, cause longer [style calculations](#), and produce costly [layout reflows](#).

[Learn more.](#)

▼ View details

Total DOM Nodes	DOM Depth	Maximum Children
2,894 target: < 1,500 nodes	25 target: < 32	51 target: < 60 nodes

▼ Critical Request Chains: 21

The Critical Request Chains below show you what resources are issued with a high priority. Consider reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load. [Learn more.](#)

Longest chain: **21,252ms** over **2** requests, totalling **10.63 KB**

▼ View critical network waterfall:

▼ 4 Passed Audits

▼ Reduce render-blocking scripts

Script elements are blocking the first paint of your page. Consider inlining critical scripts and deferring non-critical ones. [Learn more](#).

▼ Minify CSS

Minifying CSS files can reduce network payload sizes. [Learn more](#).

▼ Minify JavaScript

Minifying JavaScript files can reduce payload sizes and script parse time. [Learn more](#).

▼ Avoids page redirects: 0 ms

Redirects introduce additional delays before the page can be loaded. [Learn more](#).

Progressive Web App

These checks validate the aspects of a Progressive Web App, as specified by the baseline [PWA Checklist](#).

18

9 Failed Audits

▼ Does not register a service worker ✗

The service worker is the technology that enables your app to use many Progressive Web App features, such as offline, add to homescreen, and push notifications. [Learn more](#).

▼ Does not respond with a 200 when offline ✗

If you're building a Progressive Web App, consider using a service worker so that your app can work offline. [Learn more](#).

▼ Does not use HTTPS: 24 insecure requests found ✗

All sites should be protected with HTTPS, even ones that don't handle sensitive data. HTTPS prevents intruders from tampering with or passively listening in on the communications between your app and your users, and is a prerequisite for HTTP/2 and many new web platform APIs.

[Learn more](#).
